

uRetrieve™

The ability to have immediate access to decisions and the data necessary in the decision process is valuable for any type of analyst/care intervention but unfortunately is not readily available due to IT and system constraints.

uRetrieve™ allows fully secure thin client retrieval of previously automated decisions and the information that comprised the decisions -- such as derived variables, third party data (i.e. Credit Bureau print images, etc.) -- for immediate analyst intervention.

Typically today's billing systems, CRM and Custom Legacy Systems do not have the ability to capture and store information used and analyzed in the decisioning process, particularly years after the decision was generated.

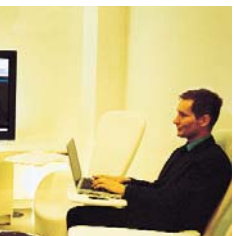

Forget about getting another project into your internal system development priority line for yet another piece of expensive customization. uRetrieve™ provides everything you need to retrieve previous decision results with no internal IT barriers.

We pride ourselves in our forward-thinking ability to use technology to query and retrieve information in a convenient password-controlled environment.

uRetrieve™ - Lightning fast decision retrieval without boundaries.
